Evaluation Matrix

Please rate the manuscript using a scale of 0 (Poor) to 2 (Outstanding)

Criterion	Description	Points (0-2)
Title and Abstract		
1. Appropriateness and clarity of the title	Evaluates whether the title accurately reflects the study's content and objectives.	
2. Quality and completeness of the abstract	Assesses the abstract's coverage of background, significance, aims, methods, and conclusions (study impact).	
Introduction and Background		
3. Clarity and relevance of the research question/problem	Examines how clearly the research question or problem is defined and its relevance.	
4. Adequacy of the background literature review	Evaluates the extent and depth of the literature review, including the critical evaluation of relevant and up-to-date knowledge.	
5. Goals and proposed hypothesis are clearly stated and justified	Assesses whether the goals and hypotheses are clearly articulated and well-justified.	
Methodology		
6. Appropriateness of the research design and methods	Examines whether the research design and methods are suitable for addressing the research question.	
7. Comprehensive description of data collection and analysis	Assesses the thoroughness of the description of data collection and analysis methods.	
Results		
8. Clarity and appropriateness of the presentation of results	Evaluates how clearly and appropriately the results are presented.	
9. Use of tables, figures, and statistics	Examines the effectiveness of tables, figures, and statistics in summarizing findings.	
Discussion and Conclusion		
10. Overview of the study key point findings and their relation to literature	Assesses how well the key findings are summarized and related to existing literature, including implications and study limitations.	
Total Score (out of 20)
